## *New LM56 Fixed Head Mower with Independent Grass Catcher Arm*

February, 2008

LM56GF with Independent Grass Catcher Arm

The Baroness Greens Mower offers the user the ability, to cut his greens to a level of precision second to none. This mower gives the most uniform cut of any mower on the market, and allows the superintendent the ability to lift the cutting height without sacrificing the ball speed. With the crisp cut that the Baroness mower is well known for in Japan, this mower takes a lot of stress off the turf helping to reduce the amount of disease in the putting surfaces.

With the Baroness Greens Mower a lot of die cast aluminum has been combined into the design, thus reducing the overall weight of the machine. As many superintendents know, the traffic that a course green sees on a daily basis is a cause of concern. While cutting the green the less weight you can put on it, ultimately helps the superintendent in his battle to maintain healthier greens. Along with many other positive aspects the Baroness Greens Mower comes with a Groomer, De-Thatcher or Brush unit. All of these are bi-directional allowing the superintendent, the ability to lightly groom, de-thatch or brush with the forward direction. And a more vigorous grooming, de-thatching or brushing with the reverse direction. With the time taking less than ten minutes to remove and replace the units, this allows the superintendent to pick and choose without having to worry about taking up too much of the mechanics time.

From left: Groomer, De-Thatcher, Rotary Brush

An unparalleled ease of maintenance puts this mower in the most loved list of mowers to work on, with taking less than an hour to totally strip down. This mower can be totally overhauled in four hours by any mechanic experienced in the maintenance of golf course equipment, opening up time for the mechanic to spend on those high maintenance machines. With the experience of over thirty years of manufacturing reels and bedknives, to stand up to the hard and stringy native variety used on greens in Japan known as Korai Zoysia, we can stand by our word when we say that you will not find a longer lasting edge on any other greens mower.

Independent Grass Catcher Arm

With the addition of the Independent Arm Grass Catcher to the Baroness LM56, Baroness has been able to bring the balance of the mower back between the front roller and rear drum. With this, they have dispersed the weight of the Grass clippings onto a separate roller, and have allowed the mower to give a consistent height of cut. Another benefit is that it is not as crucial that the grass clippings are emptied continuously, since these now have no direct effect on the height of cut. Since the Grass catcher doesn't directly affect the cutting head, the Baroness LM56 can now mow over more undulation than previous thought possible.
