VOLUME 3

Independent Arm Grass Catcher

Benefits

- Provides a truly consistent cut height.
- Allows you to get a fixed head cut, yet follow the contour like a floating head unit.
- Reduces the down pressures caused by grass clippings on the front roller.

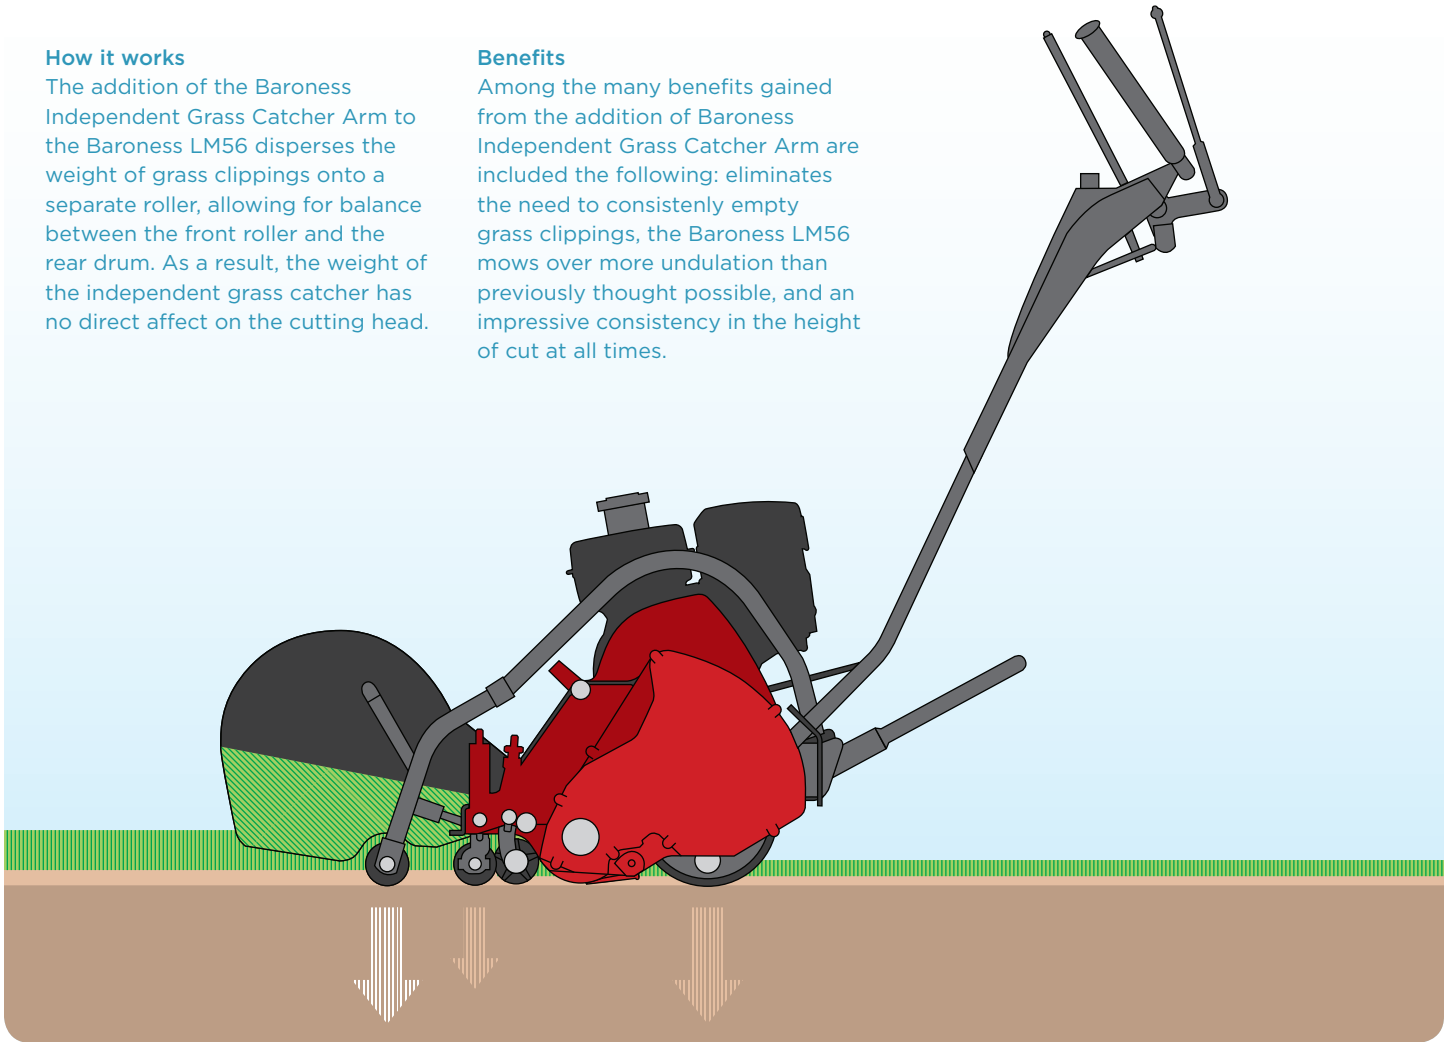

How it works

The addition of the Baroness Independent Grass Catcher Arm to the Baroness LM56 disperses the weight of grass clippings onto a separate roller, allowing for balance between the front roller and the rear drum. As a result, the weight of the independent grass catcher has no direct effect on the cutting head.

Benefits

Among the many benefits gained from the addition of Baroness Independent Grass Catcher Arm are included the following: eliminates the need to consistently empty grass clippings, the Baroness LM56 mows over more undulation than previously thought possible, and an impressive consistency in the height of cut at all times.

Baroness Dealer Network

Baroness products are available in these States as of July 2008. To find your local dealer, please visit us at www.baroness.us/locator. If you don't find one, please contact us through the contact menu on our website.
